

I'm not robot!

purge the air from the filled syringe and tubing. 2. Mount the syringe on the pump. 3. Slide the ON/OFF switch (7) to the on position (refer to figure on the following page). 4. Program the pump. 5. Purge the syringe and tubing again to remove slack from the plunger driver. 6. Connect the extension set to the patient. 7. Press START to begin the infusion B3-430 Auto Syringe AS50 Infusion Pump Operator's Manual Page 2734 Detailed Instructions Preliminary Operations Manual Purge 1. Attach a Baxter 2N Series or equivalent IV extension set to the filled syringe. 2. Remove the sterile cap from the end of the tubing. 3. Manually purge until a drop of fluid is visible at the end of the tubing. 4. Replace the sterile cap on the end of the tubing. Mount the Syringe 1. Grasp the FINGER GRIP (1) on the PLUNGER DRIVER (2) and pull it all the way out. 2. Slide the PLUNGER DRIVER to the top of the pump and release the FINGER GRIP Page 28 Auto Syringe AS50 Infusion Pump Operator's Manual B3-43035 Detailed Instructions 3. Open the BARREL CLAMP (3) by moving either of the BARREL CLAMP RELEASE LEVERS (4). Allow the barrel clamp to slide all the way open. 4. Place the syringe in the CRADLE (5). Be sure the syringe is centered in the V of the cradle, and that the flange of the syringe fits into the FLANGE SLOT (6). 5. Push the BARREL CLAMP (3) in firmly so that it securely grips the syringe barrel. The barrel clamp is shaped to fit the heel of the hand, making it easy to firmly clamp the syringe B3-430 Auto Syringe AS50 Infusion Pump Operator's Manual Page 2936 Detailed Instructions 6. Grasp the FINGER GRIP (1) on the DRIVER (2) and pull it all the way out. Slide the DRIVER down until it contacts the syringe plunger, then release. 7. Push the PLUNGER CLAMP in firmly to capture the syringe plunger. 2 1 ON/OFF SWITCH Turn the Pump On and Off The ON/OFF switch is on the left side of the pump, near the bottom. Turn the pump on by sliding the switch up to the ON position. Note: If the syringe is improperly mounted, the pump displays one of the following alert messages: CHECK BARREL, CHECK FLANGE, or CHECK PLUNGER. Examine the syringe and correct the indicated problem. If a combination of conditions is sensed, the pump displays a CHECK SYRINGE alert or alarm message instead. The pump is turned off by sliding the switch down to the OFF position. Page 30 Auto Syringe AS50 Infusion Pump Operator's Manual B3-43037 Detailed Instructions Check the Lamp Test As soon as the pump is turned on, an automatic self-test begins. This includes the Lamp Test, which tests the status display and the status panel lights. Verify that all the lights illuminate and that all parts of the status display are legible. Carefully check the Lamp Test daily, or once per shift. See Display, Battery, and Syringe Sensor Check on page 75. To examine the status display more closely during the Lamp Test, press and hold STOP while the status display characters are all visible. The Lamp Test will complete when STOP is released. If CONFIRM is pressed during the Lamp Test, the battery voltage will be displayed in the text field immediately following completion of the Lamp Test. The Lamp Test ends with a short beep. If the pump is configured to show an identifier message, it will appear in the text field at the bottom of the status display. This completes the preliminary operations. SYRINGE mfr s i z e INFUSE RATE OVER BODY WT EVERY CONC. NEXT DOSE IN TOTALT FINAL VOL LIMITVOL TOTALT DRUG VOL ml min ml hr kg hr:min Units mg ml hr:min mgu hr kg hr:min mgrams mlmcg ml B3-430 Auto Syringe AS50 Infusion Pump Operator's Manual Page 3138 Detailed Instructions Programming The pump is ready for programming when the preliminary operations have been completed. The initial programming prompt is determined as follows: If the Protocol Library feature is enabled, a protocol selection prompt is displayed. Continue with the Using Protocols section below. If the Protocol Library feature is not enabled, a mode selection prompt is displayed. Skip to the appropriate mode programming section below. Using Protocols For additional information about programming the pump, see General Programming Information on page 48. If the Protocol Library feature is enabled, the pump display alternates the prompts SELECT LIBRARY and SELECT PROTOCOL. Selecting a Protocol Library If SELECT LIBRARY is displayed, use the and keys as necessary to display the name of the desired protocol library and press CONFIRM to complete the selection. Note: If the NONE selection is available, the Protocol Library feature may be bypassed by selecting NONE. Continue with the appropriate mode programming section below. Selecting a Protocol If SELECT PROTOCOL is displayed, use the and keys as necessary to display the name of the desired protocol, and press CONFIRM to complete the selection. Note: The protocol name is continuously displayed in the text field except when a message or prompt must be displayed. If the NONE selection is available, the Protocol Library feature may be bypassed by selecting NONE. Continue with the appropriate mode programming section below. Page 32 Auto Syringe AS50 Infusion Pump Operator's Manual B3-43039 Detailed Instructions Selecting an Infusion Mode If a default mode has been assigned to the selected protocol, the pump sets the infusion mode automatically. The name of the mode is displayed briefly in the text field, and programming continues with syringe manufacturer selection. If no default mode has been assigned to the selected protocol, the pump displays a SELECT MODE prompt. Continue with the appropriate mode programming section below. For additional information about the Protocol Library, see Protocol Library Feature on page 21. Programming ml/hr and ml/min Mode In these modes, the pump runs at a programmed, constant rate. A volume limit can also be programmed in these modes. Note: If a protocol has been selected, the infusion mode may appear automatically. 1. At the SELECT MODE prompt, use or to display the available infusion mode selections. Press CONFIRM to select the desired infusion mode. 2. Use or and CONFIRM as required to select the syringe manufacturer and size. Note: If a protocol has been selected, a default infusion rate may appear automatically. Use and or the digit keys to modify this value as necessary. 3. Enter the infusion rate in ml/hr or ml/min, depending on the infusion mode selected. 4. Press CONFIRM to complete the entry. Volume Limit The Volume Limit feature is a configurable option available only in the ml/hr and ml/min modes. The pump stops when the programmed volume limit has been delivered. Enter the desired volume limit. When the delivery begins, the VOL LIMIT field displays the amount of drug remaining until the programmed volume limit is reached. The pump stops when the VOL LIMIT field reaches zero. The Volume Limit feature can be temporarily disabled without reconfiguring the pump by programming zero (0) in the VOL LIMIT field B3-430 Auto Syringe AS50 Infusion Pump Operator's Manual Page 33
